

Proposed ePDF workflow

Notes from meeting held June 15, 2026, with bwB, dmj, dxl, lkf, nsp.

Action items

- Ask PRG to add an ARC task to PUBL to signify that the most recently published PDF is approved for distribution.
- Provide an arc script for PEs to use on snort. It will wandle the ARC task and send email to ARC-Approval@ams.org. This will be Debby's cue to create the ePDF product. PRG should also check that this task has been wanded before making the PDF available on the bookstore.
- publish should be run if and only if you want to update the PDF on the bookstore (and in the library collections). This includes
 - Corrections in response to the ARC review.
 - CIP-only updates that do not go to the Print Shop.
 - Restock/reprint with or without corrections.

In all of these cases, the PDF in the bookstore and in the collections will be updated.

- Add a 'CIP Update' option to publish. This will update the ePDF in the bookstore and in the collections but will *not* send the new PDF to the Print Shop. (I think this is the only occasion when Debby will need to get a copy of the publish email, since there will be no separate ARC email for this case.)
- PTG will update the library collection management tools to make sure the PDF in the library collections is updated whenever a new PDF is published.

Questions

- publish currently has four modes: "First printing", "Reprint", "Perpetual restock", and "AOD". AOD is obsolete, but "Perpetual restock" also hasn't been used in recent years. Should it be removed too?
- I think we left open the question of whether CONM volumes need to be embargoed until their cover date.
- Did we decide that Memoirs does *not* need to be embargoed, or is that still under discussion?
- Do changes ever result from checking the bound copy (e.g., is this the first time the PE sees the printed cover)? Do we need to factor this into our process or is it so rare that we can handle it on a case-by-case basis if it ever comes up?
