

This document has a list of common characters which when mapped to the PDF by $\text{\TeX}$ become certain UTF symbols rather than their original, ASCII source.

Annotating this document is an easy way to test if `corrinline` handles these “missing” glyph mappings:

- (1) ”here is a mistake”
- (2) “And also here”
- (3) If you’re in England “this” is fine, but not in the US of A. ~~If you’re there, you’ll have to do “this.”~~
- (4) Look at \$5.
- (5) The Cauchy–Schwarz inequality is often written as “The Cauchy–Schwarz inequality.”
- (6) p. ~~5–10~~, not p. 5–10 or p. 5–10, though I don’t think I’ve seen the last ones
- (7) Speaking of don’t, how about do not?
- (8) Consider the following— for some reason I thought a hyphen surrounded by spaces looked okay
- (9) Or, well— if you don’t have time for spaces, that’s even worse
- (10) Consider the following—
